

Packages to install

- flask
- werkzeug
- numpy
- soundfile
- moviepy
- scipy
- IPython
- transformers

Execution

Open the terminal in the folder where the `app.py` file exists and execute the following command.

```
flask run --host=0.0.0.0
```

When you do this, you'll be able to see a URL mentioned in the output which looks something like this

```
https://192.168.0.***:5000/
```

copy the above mentioned link and paste in any of the web browsers.

if you don't want to use the web UI, you can execute the `model.py` instead as well. but make sure to go to line 36 in the `model.py` file, remove that line from comment and then pass the *path to the audio file* as a parameter to the function.
